

How To Discover Who Owns Any Phone Number

Here's a common trick that is used by detectives and private investigators - a full reverse search on a phone number. This type of search will let you uncover somebody's name, address and detailed background information simply by having their phone number. Here's how.

Since more than 50% of phones are either unlisted or cell phones these days, there is a huge shortage of phone numbers in the phonebook. None of the phones that are unlisted are publicly published, so it can be difficult to find information on them.

When there's a problem, you can bet someone is going to come along and fix it! That's exactly what happened in this case. There are now specialized businesses that purchase access to phone records and then build databases that people can search through.

You will hear these called "reverse phone directories" or "reverse cell phone directories". It's interesting to see how they work - you simply punch in the phone number at their website and the owner's details are then instantly displayed on your computer screen.

You can use the link at the bottom of this article to try a free sample search and see how this works.

Obviously these companies charge a fee for using their services, but it isn't expensive. One suggestion is to look for a company that offers unlimited searches for a 'one-time' fee. This way you are only billed once and can then use as many searches as you want.

This service can be useful for different reasons - you might want to "investigate" a phone number that keeps showing up on your spouse's phone or perhaps there's a number that keeps prank calling you. It's a good tool to have whenever you need to look into someone but only have their number.

It's always neat to see all the details you can find out about someone just by having their phone number. This can be a great tool to have that lets you feel like a detective right from your computer!
