

Portable Solar Solutions Are Great For Camping

There are hundreds of different solar power systems available which are portable, solar power is very popular at the moment. There are a wide range of different types of panels that are offered, this allows you to choose the best one to suit the needs of you and your family. You might for example just need solar panels to power a laptop computer, or you might require one to power your whole house. No matter how much power you need there is a solar panel for your needs.

You can purchase small portable solar panels, and large ones. If you want to use AC electrical equipment when you go camping then you will have to purchase a medium size of solar system. This will be able to cope with running all of the tools you need.

If you are a businessman and travels frequently then you might require a small, light solar power system which can be transported very easily. Although these are small they are capable of running small electrical items including laptops, small TV's and lights. You can also use the same panels to charge your cell phone. These panels fold up quite small and can even be stored in a backpack.

You can buy small panels that are between 5 watts right up to 30 watts. These are flexible panels that can be rolled up. This is state of the art technology that can be used to charge virtually any battery powered item. Even if it's not a sunny day the solar panels will be able to generate enough power to charge your batteries. There are a number of battery connections that are included with the panels that can connect to a variety of different [kitchen cabinets and gadgets](#). They are particularly easy to use, and instructions are provided just in case you can't understand. When using the solar panels you should point them in the direction of the sun.

Powering bigger gadgets with portable solar systems

You can also purchase portable solar systems that are much bigger and capable of powering much more. These systems are suitable for use in camping, backpacking and for emergency use. The power systems can provide 20 watts or even more, but they still remain quite light. These systems can be used to power notebook computers they can charge any equipment even when it's cloudy.

This panel is capable of providing a lot of power, this means you can run your laptop computer straight off it instead of only using it to charge your battery. Your computer can be used for a long time when using powerful solar power systems. You may need some form of converter in order to power certain notebooks. Using solar power to charge your battery will keep your batteries in good condition.

All you need to do is move the portable solar panels with you, when you want to use power just set them up and plug it in. There are a number of great features that solar systems can be used for. It can be thrown into any bag with a seconds notice, it can be used in your car or while you are out in a park. One thing for sure is this system will ensure that your gadgets will have power wherever you are.
